

# TURFSTARTER (220sgn)

## 14-11-10

- ✓ 25% of N from UFLEXX stabilised Nitrogen reducing volatilisation and leaching.
- ✓ High Phosphorus formulation for root enhancement at renovation or seeding.
- ✓ Use when seeding, turfing or renovating to encourage rooting and recovery.
- ✓ 220sgn (average particle = 2.2mm) for use on higher cut turf.

### TECHNOLOGY

The combination of high Phosphorus and UFLEXX stabilised Nitrogen promotes vigorous seedling development and root establishment and significantly increases Nitrogen absorption by turf grass to provide uniform growth, deep root mass and consistent colour intensity for 12-16 weeks.

### USE PATTERNS

Use this product at seeding, establishment or renovation when high P feeding is required to stimulate vigorous root development and Nitrogen release needs to be stable and extended. Apply at 125-250kg / ha.

### SPREADER SETTINGS
