- » Increase in microbial activity
- » Assists in the recovery from environmental stresses

VESICULAR ARBUSCULAR MYCORRHIZAS (VAM)

- » VAM are beneficial symbiotic fungi that can colonize up to 80% of the turf root mass. The fungal hyphae that are produced grow out into the soil medium further than the root hairs themselves, as a result of greater nutrient access within the medium as the hyphae carries ordinarily unavailable nutrient back to the plant.
- » VAM releases compounds that can dissolve elements susceptible in forming insoluble compounds such as phosphorus and trace elements
- » Numerous studies have also shown VAM to improve the plants ability to recover from water stress
