

eco-flo organic soil improver range

How is the eco-flo range different to other forms of dolomite, gypsum and lime products?

- The eco-flo range are all liquids so they can be put through trickle irrigation, centre pivot, boom sprayers or even applied by aircraft which makes the eco-flo range much more user friendly and versatile.
- The eco-flo range is fast acting due to the micro particle sizes of the product averaging between 5 -10 microns (0.005mm-0.01mm). The smaller the particle size the greater the contact with soil particles resulting in faster soil correction and nutrient availability.

- eco-flo has been formulated with super concentrated seaweed extract to make the range more bio-active. Calcium is absorbed behind new root tips so the added seaweed extract (which encourages root development) increases calcium uptake. It also reduces plant stress and improves soil structure.
- The eco-flo range is manufactured using a patented suspension technology providing peace of mind that the product will remain stable long after other formulations have set hard in the bottom of the drum.

eco-flo dolomite

CORRECTS ACID SOILS AND BOOSTS CALCIUM & MAGNESIUM LEVELS
 Active Ingredient: 35% w/v Calcium, 12% w/v Magnesium

Key Features

- ✓ Corrects acid soils caused by existing soil chemistry and artificial fertilisers
- ✓ Strengthens plant growth and fruit production by adding calcium, magnesium and seaweed extracts to the soil
- ✓ Ratio of calcium to magnesium better reflects plant needs compared to powdered dolomite
- ✓ Perfect for magnesium loving plants eg roses, tomatoes, capsicums and potatoes
- ✓ Extremely concentrated – 1L of eco-flo dolomite is equivalent to the clay breaking capacity of 40kg of granular product
- ✓ Fast acting due to the very small particle sizes
- ✓ eco-flo dolomite is BFA Registered Organic

How does it work?

eco-flo dolomite contains superfine particles (0.01 mm in size) which are more readily available than traditional powdered dolomite (1mm). eco-flo dolomite displaces acidifying hydrogen ions from soil particles and replaces them with calcium and magnesium ions resulting in a more alkaline soil. Calcium is absorbed behind new root tips so the added seaweed extract (which encourages root development) increases calcium uptake. It also reduces plant stress and improves soil structure.

USE	Soil in pH Range	Sand/Loam L/ha	Clay L/ha	HOW TO APPLY
Very Acid Soil	4.5-5.5	100-75	125-100	Apply with a min. dilution of 1 part to 5 parts water. For boom spray min. nozzles size of 06-08 or flood jet nozzles. For uniform application maintain agitation throughout application. Frequency is dictated by soil test results.
Acid Soil	5.5-6.5	75-50	100-75	
Maintenance	6.5-7.5	50-25	75-50	
Low Ca and/or Mg in Soil		5-10	10-15	Apply monthly
