

CALCIPRILL MINI (100SGN)

SOIL PH MANAGEMENT PRODUCT

- ✓ High Purity Calcium carbonate
- ✓ Can be used on all soil types
- ✓ Easy to spread granular product 1 mm
- ✓ Quick soil pH value improvement

TECHNOLOGY

Calciprill is a granular source of lime and magnesium containing 95% Calcium Carbonate and 3.5% Magnesium carbonate, both elements have a high purity and neutralising value of 99%, which allows for a quick soil reaction in changing pH.

The granulation process and purity provides a greater economic solution than using traditional Aglime or low purity and neutralising value of other granulated Lime products in the market.

USE PATTERNS

General rates for soil pH improvement is 150-250Kg/Ha on sand/loamy sand soil types and 250 – 500kg/ha for clay /loamy clay soil types. Calciprill granular has minimal dust which allows less wind drift onto non target areas. Can be used for spot treatment of problem areas. Calciprill provides an excellent source of calcium, an essential nutrient for plant cell structure. Calciprill is available in 20kg bags and 1ton bulker bags

SPREADER SETTINGS

	Desired rate	
	Low rate 150 kg/Ha	Med rate 250 kg/Ha
Lebanon	N/a	3 ½
Accupro	H	H 1/2
Lesco	D or 10	D 1/2 or 11

The Spreader settings are guidelines only. For latest spreader settings always consult our website. The spreader should be calibrated prior to application.

GUARANTEED ANALYSIS

Calcium	38%
Magnesium	8%
