

HIGH K (100sgn)

15 – 0 – 25

- ✓ Slow release Nitrogen for steady turf response
- ✓ High Potassium for pre-conditioning against stress, added iron for colour
- ✓ Apply well ahead of predicted stress periods to ensure K uptake
- ✓ Can be used on all turf types
- ✓ 100sgn for use on greens, tees and all fine turf surfaces

TECHNOLOGY

Nutrite High K is homogenous product providing a uniform turf response (ie. growth and colour). The high K provides the stress management benefits of Potash and quick uptake due to its mobility. 50% of the N is derived from methylene urea providing long term N feeding. This product does not require immediate irrigation once applied to a dry turf surface (irrigation should be applied within 24hrs)

USE PATTERNS

This product is ideal for turf stress management, apply in Spring and Autumn or ahead of predicted stress periods (ie. high temperatures). Nutrite High K also has the versatility to be used as a renovation fertiliser to elevate K loading in the soil and the turf plant. Apply better 90-175kg/ha or 0.9 to 1.75kg/100sqm.
