

GREEN STARTER(100sgn)

16 – 9 – 6

- ✓ Slow release Nitrogen for steady turf response and colour up to 16wks
- ✓ High Phosphorus formulation for root enhancement at renovations or turfgrass establishment via seeding or sprigging
- ✓ Ideal for use in stimulating recovery following or during the incidence of root disease infection
- ✓ Can be used on all turf types
- ✓ 100 sgn for use on greens, tees and all fine turf surfaces

TECHNOLOGY

Nutrite Green Starter is homogenous product providing a uniform turf response (ie. growth and colour) via a highly dispersible granule with Micro N Fusion technology. The High P formulation provides quick uptake for repair of root structures following disease or insect activity. Ideal for renovation to enhance root activity, recovery and colour. Green Starter is easy to see and apply, with a low salt index and the additional advantage of negligible mower pickup. 40% of the N is delivered from Methylene urea providing long term N feeding. This product does not require immediate irrigation once applied to a dry turf surface (irrigation should be applied within 24 hrs).

USE PATTERNS

This product is ideal for repair of root structures following disease or insect activity. The product can also be used as part of a renovation program where P levels need to be amended. Nutrite Green Starter also has the versatility to be used primarily as a renovation fertiliser and to directly assist in root and stem recovery. Apply between 150-240 kg/ha or 1.5 to 2.4/100 sqm.
