

MESA sports (210SGN)

19-0-16 + 3 Fe

- ✓ Premium blended fertiliser containing 62% MESA and 3% Fe for magic colour.
- ✓ 1:1 N to K ratio provides higher Potassium for stress and disease resistance.
- ✓ Non burning slow release for excellent colour and extended feeding.
- ✓ 210sgn (average particle = 2.10mm) for higher cut turf situations.

TECHNOLOGY

MESA[®] technology combines Sulphate of Ammonia and Methex[®] 40 in a single granule. This technology allows the Sulphate of Ammonia to be released more steadily offering feeding with improved reliability and consistency. The green up is achieved without the surge effect for sustained surface quality.

USE PATTERNS

Suitable for all turf types when immediate nutrition is required with a small amount of slow release to trail. The combination of Ammonium Sulphate and Iron will accelerate the green up and provide a dark green colour. Apply at the rate of 200-250 kg/ha and water in thoroughly.
