

eco-flo organic soil improver range

How is the eco-flo range different to other forms of dolomite, gypsum and lime products?

- The eco-flo range are all liquids so they can be put through trickle irrigation, centre pivot, boom sprayers or even applied by aircraft which makes the eco-flo range much more user friendly and versatile.
- The eco-flo range is fast acting due to the micro particle sizes of the product averaging between 5 -10 microns (0.005mm-0.01mm). The smaller the particle size the greater the contact with soil particles resulting in faster soil correction and nutrient availability.

- eco-flo has been formulated with super concentrated seaweed extract to make the range more bio-active. Calcium is absorbed behind new root tips so the added seaweed extract (which encourages root development) increases calcium uptake. It also reduces plant stress and improves soil structure.
- The eco-flo range is manufactured using a patented suspension technology providing peace of mind that the product will remain stable long after other formulations have set hard in the bottom of the drum.

eco-flo gypsum

FAST ACTING LIQUID CLAYBREAKER
Active Ingredient: 35% Calcium 25% Sulphur

Key Features

- ✓ Breaks up compacted clay soils & improves drainage
- ✓ Reduces sodium (salt) build-up from saline irrigation and recycled/grey water use
- ✓ Strengthens plant growth and fruit production by adding calcium, sulphur and seaweed extracts to the soil
- ✓ Extremely concentrated – 1L of eco-flo gypsum is equivalent to the clay breaking capacity of 40kg of granular product
- ✓ Fast acting due to the very small particle sizes
- ✓ Doesn't alter soil pH
- ✓ eco-flo gypsum is BFA Registered Organic

How does it work?

eco-flo gypsum contains superfine particles (0.005mm in size) which are more readily available than traditional powdered gypsum (1mm). eco-flo gypsum encourages clay particles to bond together and form larger soil crumbs. This in turn opens up the soil structure allowing for better drainage and aeration. eco-flo gypsum also displaces sodium particles from saline irrigation and recycled/grey water use and allows it to wash through the soils. Calcium is absorbed behind new root tips so the added seaweed extract (which encourages root development) increases calcium uptake. It also reduces plant stress and improves soil structure.

USE	Na (ESP%) in Soil	Sand/Loam L/ha	Clay L/ha	HOW TO APPLY
Soil Sodium displacement and & compaction relief	5.0 -7.5	25-50	50-75	Apply with a min. dilution of 1 part to 5 parts water. For boom spray min. nozzles size of 06-08 or flood jet nozzles. For uniform application maintain agitation throughout application. Frequency is dictated by soil test results.
	7.5-10.0	50-75	75-100	
	10.0-15.0	75-100	100-125	
	15.0+	100-125	125-150	
Calcium and or Sulphur deficiency		5-10	10-15	Apply monthly
