

MP HIGH K 15-0-25

100 SGN Homogeneous Granule

- Slow release Nitrogen for steady turf response
- High Potassium for pre-conditioning against stress
- Apply well ahead of predicted stress periods to ensure Potassium uptake

TECHNOLOGY

MP High K is a homogeneous product providing a uniform turf response (ie. growth and colour). The high Potassium provides the stress management benefits of Potash and quick uptake due to its mobility. Methylene urea delivers 50% of the Nitrogen to provide long term release and sustained availability.

USE PATTERNS

This product is ideal for turf stress management, apply in Spring and Autumn or ahead of predicted stress periods (ie. high temperatures). Nutrite High K also has the versatility to be used as a renovation fertiliser to elevate Potassium loading in the soil and the turf plant. Apply between 90-175kg / ha or 0.9 to 1.75kg / 100sqm.

It does not require immediate irrigation once applied to a dry turf surface (irrigation should be applied within 24 hours)

SPREADER SETTINGS

	Desired rate	
	0.9 kg/100 m ²	1.75 kg/100 m ²
Lebanon	NA	3 ½
Accupro	D	E
Lesco	C or 7	D or 9

The spreader settings are close approximations.
Trial calibration is recommended before wide spread use.
